BTE TECHNOLOGIES, INC. EARNS ISO CERTIFICATION

HANOVER, Md. and GREENWOOD VILLAGE, Colo. ... September 12, 2005 ... BTE Technologies, Inc., a leading provider of software, equipment and services to healthcare providers as well as customized solutions for the workers compensation industry, announced today that the company has obtained two ISO certifications.

The ISO 9001:2000 certification earned by BTE pertains to the company's quality management system for its overall manufacturing operations while the ISO 13485:2003 certification relates specifically to the quality systems for its medical products.

ISO (International Standards Organization) is a global network of the standards institutes of 153 member countries. The organization codifies and publishes standards of quality for diverse commercial operations such as manufacturing, distribution and programming.

As the world's largest developer of standards, ISO has significant economic and social influence, impacting many aspects of society from industrial and business organizations to governments, trade officials, private and public services sectors, and, ultimately, to consumers. ISO standards allow the global supply of products and services to be more efficient, safer and cleaner. Details about ISO and its standards can be found at <http://www.iso.org>.

The ISO certifications earned by BTE are the culmination of a rigorous and sustained effort at the company to establish a pervasive Quality Management System (QMS). The QMS involves many aspects important to the successful manufacturing of a product including design, documentation, assembly, testing, inspection, auditing, supplier evaluation and customer communication.

“This certification is a significant achievement for the company. Meeting the ISO standards, which require continuous company oversight, attests to the integrity of BTE’s manufacturing processes and will strengthen our position worldwide. We appreciate the efforts put forth by the entire BTE team, which resulted in our ability to earn this prestigious, international certification. Our clients will now be more confident in the equipment, technology, protocols and solutions we are delivering to them,” noted Charles T. Wetherington, president at BTE Technologies.

BTE Technologies is an international supplier of equipment for physical medicine and rehabilitation in more than 25 countries. Many countries require that suppliers be compliant with ISO standards. While BTE Technologies has continually exercised rigid control of its processes, this ISO certification will now assure the global medical community of the company’s status and reliability as a quality manufacturer.

BTE Technologies’ rehabilitation products and solutions are used throughout the healthcare industry and can be found in physical and occupational therapy clinics around the world. Its innovative technologies are also used to provide a range of testing and return-to-work services and solutions for the occupational and non-occupational disabilities market.
